

## **Management Briefing – Non-Technical**

On August 18 at approximately 14:00 UTC, security monitoring systems detected suspicious activity targeting an ip 192.168.159.138. By 14:01 UTC, the security team received an automated alert and began investigation. The affected system was isolated and the source of the activity was blocked by 14:10 UTC, preventing further risk. The incident was fully contained and escalated for review at 14:15 UTC. No sensitive data was accessed, and there was no impact on business operations. This incident demonstrates timely detection, effective response, and the value of continuous security monitoring.
